

Linescape API - Postman Setup Instructions

10/21/2016

1. Download and install the Postman extension for Chrome or Mac at <https://www.getpostman.com/>
2. Launch Postman and click the Import button in the navigation bar to import a new collection. Browse to linescape_api_postman.json and click "Open" or drag it into the postman nav

3. Set up a new environment in postman by clicking the gear icon in the upper right and clicking "Manage Environments".
 - In the Manage Environments popup, click Add to create a new environment. The following two keys must be added:
 - linescape_key -- <your Linescape api key>
 - linescape_url -- <https://api.linescape.com/api/v1>
 - When you've added the environment and set the two keys, click Update, close the popup, and select the new environment from the dropdown menu in the upper right that says "No Environment".

4. Now you can test API calls from within Postman. Make sure to select the environment you just set up, then from the left panel choose the endpoint you want to try and click Send. To adjust the parameters, edit the query string in the URL.
